(a) Median suspended sediment, 2024–25

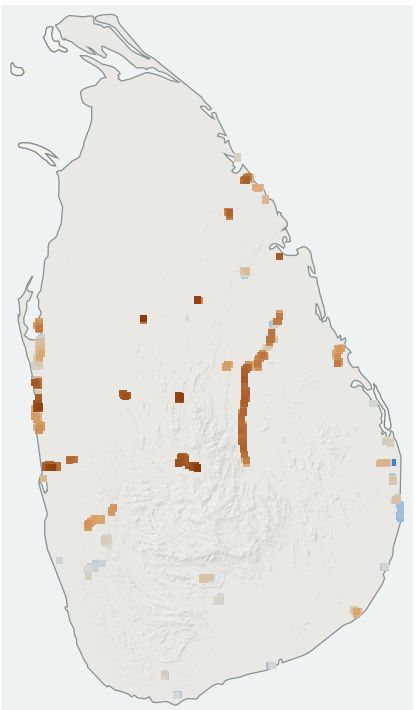

(b) Season with the highest median

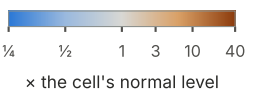

- NE monsoon (Dec–Feb) (171)
- 1st inter-monsoon (Mar–Apr) (223)
- SW monsoon (May–Sep) (106)
- 2nd inter-monsoon (Oct–Nov) (250)

(c) Cyclone Ditwah flood pulse

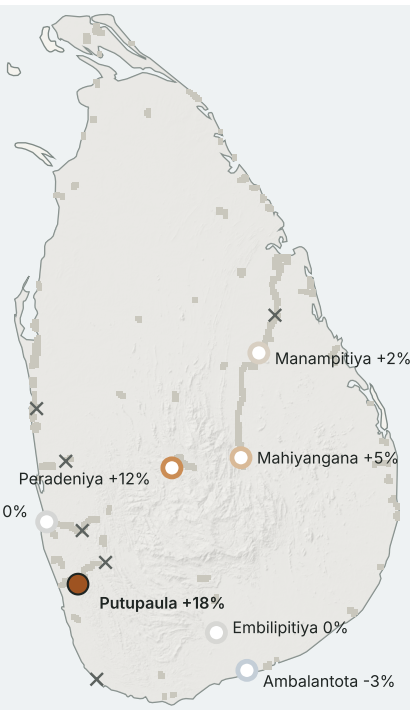

26 Nov–12 Dec 2025 vs normal · 490 cells · median 5.4×

(d) Station trends, 2019–2025

seasonal Kendall slope, % per year

- × < 3 years of monthly data
- trend not significant
- significant (FDR q < 0.05)

Copernicus Sentinel-2 L2A (Sen2Cor), 2,179 scenes 2024–2025 · JRC Global Surface Water · Copernicus GLO-90 DEM · Natural Earth. SPM: red-band Nechad algorithm, uncalibrated. Trends: seasonal Kendall test with Benjamini–Hochberg correction.
